EDUCATION

EDC Paris Business School

Master's Degree (Grande École Program) – Data Science & Business Intelligence

Sep 2025 – Sep 2026

Paris, France

National Institute of Applied Sciences and Technology (INSAT)

Engineering Degree in Networks and Telecommunications

Sep 2020 – Sep 2025

Tunisia

EXPERIENCE

Data Science Apprentice

Suricog

Sep 2025 – Present

Paris, France

- Development and improvement of data processing pipelines for eye-tracking analysis.
- Implementation of advanced algorithms for saccade detection and pursuit signal analysis.
- Performance optimization of models using fitting techniques (Heaviside, sinusoidal fitting) and signal processing.
- Collaboration with product and research teams to integrate solutions into industrial environments.
- Contribution to internal tools improvement and unit testing.

Generative AI Intern

Algotat

Mar 2025 – Sep 2025

Paris, France

- Developed an industrial benchmark to evaluate the performance and cost of dozens of LLMs for e-commerce product data enrichment.
- Compared over 10 task-specific prompts based on extraction accuracy and processing cost relative to input/output size.
- Benchmarked models hosted on Scaleway (Generative APIs, Managed Inference, GPU instances) to optimize response time and coverage.
- Provided strategic recommendations on optimal providers and prompt optimization to reduce costs while maintaining high quality.

Data Science Intern

Manipal Institute of Technology (MIT)

Jul 2024 – Sep 2024

India

- Developed an AI-based system to analyze device data in a smart city prototype.
- Applied machine learning and deep learning algorithms to detect cybersecurity risks in connected devices.
- Built an interactive Flask interface to display cybersecurity predictions for fast decision-making.

Mobile Development Intern

Telnet Holding

Jul 2023 – Sep 2023

- Designed and developed an Android application for EMV tag dictionary creation using Kotlin.
- Improved user experience with an intuitive interface.
- Analyzed EMV tag values to optimize detection and accelerate transactions.

PROJECTS

CI/CD Deployment of a Web Application | Jenkins, Terraform, Docker, Kubernetes, Cloud

Jan 2025 – Mar 2025

- Designed and implemented a full CI/CD pipeline for automated deployment of a web application in the cloud.
- Used Jenkins for continuous integration, Terraform for infrastructure as code, and Docker for service containerization.
- Set up a Kubernetes cluster for container orchestration, automatic scaling, and pod monitoring.
- Ensured secure, scalable deployment reducing time-to-production and improving environment reliability.

Graph Transformer for Human Embryo Selection | Transformers, Computer Vision, GNN

Jan 2024 – Jun 2024

- Project in collaboration with Aziza Othmana Hospital (Tunisia) and EFREI Engineering School (France).
- Studied graph theory and transformer architectures through 15+ research papers.
- Collaborated with three colleagues to segment embryo images into patches and extract node/edge features to build graph representations.
- Implemented a graph transformer achieving 85% accuracy, outperforming CNN models by 5%.

Image Anomaly Detection | Autoencoders, Computer Vision, PyTorch, Python

Mar 2023 – May 2023

- Developed a deep learning algorithm using autoencoders for anomaly detection in satellite images (5,000+ samples).
- Used image reconstruction techniques to accurately identify 4 specific types of anomalies, including storms and other critical events.
- Evaluated model performance using multiple metrics, achieving 95% accuracy and ensuring high reliability in anomaly detection.

TECHNICAL SKILLS

Languages: Python, C

Web Development: Spring Boot, Angular, NestJS, React.js

Cloud: Azure, Scaleway

Big Data: Hadoop, Spark

Databases: MySQL, SQL Server, PostgreSQL, MongoDB

Tools: Git, Docker, PyCharm, Jira, Bitbucket

EXTRACURRICULAR ACTIVITIES

Professional handball player

Sep 2009 – Present

LANGUAGES

Arabic: Native **English:** Advanced **French:** Advanced **German:** Beginner
